

Hassco Commercial Systems

1. Dispenser
2. Submersible Pump
3. Normal Vent
4. Emergency Vent
5. Lockable Overfill Box c/w fill
6. Stairs & Platform

General Information

HASSCO's Double Wall Commercial System incorporates the latest technology to provide a cost-effective and environmentally safe aboveground fuel storage system. The commercial system is very convenient for fleet owners, bus lines and the trucking industry just to name a few. The primary tank is sealed inside a secondary outer wall with a permanent vacuum drawn between the two walls. If a leak occurs, the vacuum is lost indicating that the tank should be inspected. The outer tank safely contains inner tank leaks, eliminating environmental damage, liability and clean-up costs. The sturdy steel construction exceeds fire safety standards and is sandblasted and coated to ensure long-life. This system can be easily converted into a retail system using legal for trade dispensers.

Options

- Custom finishes and colours
- Tank liners, hose reels and various card-lock systems to monitor usage
- Transfer pumps and meters
- Legal for trade pumps & meters

Sizing

- From 10000L

Conformity

- ULC
